Alexandre Alves

Data Scientist | AI Developer

ajr-alves.github.io | alexandre.jr.alves@outlook.pt | https://www.linkedin.com/in/alexandre-j-r-alves/

PROFILE

Data Science master's graduate (NOVA IMS) specialising in machine learning and AI. Experienced in graph-based fraud detection, applied to Ponzi schemes on Ethereum, and in building LLM-powered automation for business processes. Currently a developer at AI Solutions, building AI agents that automate reporting and quoting.

SKILLS

Python | SQL | Machine Learning | Agentic AI & LLMs | Data Analysis | English (Proficient)

CERTIFICATIONS

- Databricks Certified Generative AI Engineer Associate
- Microsoft Certified: Azure AI Fundamentals
- Google Associate Data Practitioner
- Microsoft Certified: Azure Data Fundamentals
- PCAP – Certified Associate Python Programmer
- Professional Scrum Master™ I (PSM I)

PROFESSIONAL BACKGROUND

AI SOLUTIONS · AI automation startup, Lisbon

Developer | October 2026 - Present

- Built AI agents that automate client reporting by reading incoming business reports and emailing a concise executive summary in HTML.
- Built an automated quotation pipeline that processes customer pricing requests and generates quotes, replacing manual preparation.
- Sole developer of Yappr, an internal AI speech-to-text tool built in-house to significantly reduce third-party software costs.

CAPGEMINI · Technology consulting

Data & AI Academy | November 2025 - June 2026

- Contributed to modernising a corporate data platform for an insurance client on Google Cloud and Microsoft Azure, covering data ingestion, modelling and data quality for reporting and governance.

ACADEMIC BACKGROUND

NOVA IMS

Master's in Data Science and Advanced Analytics (Business Analytics) | 2024 - 2026 | Final Grade: 17 (out of 20)

Thesis: Identifying Ponzi-like tokens through Blockchain Transaction Networks on Ethereum | 17 (out of 20)

- Applied machine learning to blockchain transaction networks to detect Ponzi schemes on Ethereum.

Developed Projects

- Implemented a RAG architecture for a domain-specific chatbot at Fidelidade.
- Developed a machine learning model to forecast sales for a Siemens business sector.
- Developed a machine learning model to predict claim types for insurance companies.

ISCTE

Bachelor's in Data Science | 2021 - 2024 | Final Grade: 15 (out of 20)

Developed Projects

- Clustered traffic accident data to identify hazardous areas.
- Analysed and forecast energy consumption in Portugal, in collaboration with E-REDES.
